

# Electric Low-Pro LSO

The Electric Low-Profile Lumbar Sacral Orthosis is a modular brace using all the components of the larger body jackets. A newly created electrotherapy Garment Pad with the ability to add any electrotherapy stimulator is now available. The combination of electrotherapy stimulation and support from the back brace will be conducted through the garment to the treatment site into the lower lumbar, and will provide great support and relief. These components are compiled into the new lower profile format while still providing support and rigidity, which is ideal for post-surgical or non-surgical patients.

Low Pro orthosis brace is a semi ridged back brace with an extra large posterior support. This back brace is easy to apply, comfortable to wear, and provides real support. The Low pro spinal design uses light weight polymers to replace traditional rigid plastics and unloads the spine for chronic and acute diagnoses. The design also aligns the spine in a natural curve and gently compresses the abdominal cavity, producing inner cavity pressure. This unloads the spine, which makes the back brace ideal for non-surgical candidates or for chronic pain patients with minor surgeries such as IDET Procedures.

## FEATURES

- Electrotherapy garment material integrated within brace.
- Provides support to the thoracic, lumbar and sacral bones of your back.
- Lightweight and low profile.
- Soft, breathable, interior spacer fabric.
- Aligns the spine in a natural curve and gently compresses the abdominal cavity, producing inner cavity pressure.
- Ideal for non-surgical patients or for chronic pain patients with minor surgeries such as IDET Procedures.
- Semi Ridged Back brace with an extra large posterior support.
- Easy to apply, comfortable to wear, and provides real support.

## LOW PRO SIZES

- 26 or less is small
- 26 to 38 is medium
- 38 -46 is large
- 46 + is XL

HCPC:  
L0627 (Back brace) and  
E0731 (electrotherapy garment pads)
